Clinical Sciences Building Retrofit and Renovation

The Clinical Sciences Building (CSB) is being renovated to meet current seismic safety requirements and to provide instructional and meeting spaces that support modern teaching and research. The project will also connect Parnassus Ave. to the interior Saunders Court with a new entrance and gateway. Construction is scheduled to be complete in the first quarter of 2020.

October 2019

The project reached major milestones in early October; the tower crane and the manlift on the north side of the building have been removed. Construction activity will increasingly focus on the renovation of the building and creation of new interior spaces.

Streetscape work is scheduled to begin on Parnassus Ave. in late October, which will impact sidewalk access adjacent to CSB; details will be shared as soon as dates are confirmed.

Construction Activity

- Exterior scaffolding is being removed over much of the building. It will remain in the area formerly occupied by the manlift to allow for restoration work.
- Final exterior painting is underway.
- Windows and doors for the gateway will be installed starting in late October.
- Window and wall glass at the Pavilion will be installed starting in mid-October. Some of it includes artwork of historic images.
- Construction of interior walls continues on all levels, including layout, framing and drywall.
- The installation of interior utilities is ongoing.
- Exterior activity on the south side of the building includes connections to the Nursing Building and may be noisy.
- Restoration in Magnolia Court (around the base of the tower crane) is scheduled to continue through December.
- Restoration of the landscape on the south side of the building is scheduled to begin in late October. The fencing in the center of Saunders Court is scheduled to remain for now.

All dates are subject to change.
